

HydroWalk + Filling System

Disinfection plays an important role in the horticultural and agricultural sector. A common problem is that bacteria and fungi are carried into sterile.

To avoid this problem Henofa has developed a special range of disinfection mats that are sold under the brand name HydroWalk. The disinfection mats are versatile and can be placed in front of entrances to greenhouses, sheds, stables and laboratories.

The HydroWalk + filling system is composed of highly wear-resistant materials. The outside consists of PVC fabric, which together with a PE mesh ensures a strong whole. The material inside the HydroWalk is a synthetic mat, which can retain liquids very quickly and in reasonable quantities. The HydroWalk is strong and robust. This makes it possible to cycle, walk and even drive over it with a motorized vehicle.

This model is equipped with a filling system, which ensures an even distribution of the disinfectant over the mat. The filling system is so robust that vehicles can be driven over the mat.

Refilling is very simple, by connecting the filling system to an (automatic) dosing pump. In this way, the disinfectant is handled effectively and you do not have to worry about refilling the mat. Optimal operation is guaranteed.

- ❖ Composed of highly wear-resistant materials;
- ❖ Strong and robust;
- ❖ Thin but super absorbent;
- ❖ It is possible to cycle, walk and drive over the mat;
- ❖ The filling system ensures an even distribution of the disinfectant;
- ❖ The filling system is easy to connect to a dosing pump.
