

# HydroWalk Disinfection mat

Disinfection plays an important role in the horticultural and agricultural sector. A common problem is that bacteria and fungi are carried into sterile rooms.

To avoid this problem Henofa has developed a special range of disinfection mats that are sold under the brand name HydroWalk. The disinfection mats are versatile and can be placed in front of entrances to greenhouses, sheds, stables and laboratories.

The HydroWalk disinfection mat is composed of very wear-resistant materials. The outside consists of PVC fabric, which together with a PE mesh ensures a strong whole. The material inside the HydroWalk is a synthetic mat, which can retain liquids very quickly and in reasonable quantities. The HydroWalk is strong and robust. This makes it possible to cycle, walk and even drive over it with a motorized vehicle.

- ❖ Strong and robust
- ❖ Thin but super absorbent
- ❖ Possible to cycle, walk and drive over the mat with a motorized vehicle
- ❖ Mats can be customized for access portals
- ❖ Various dimensions
- ❖ Also available with an automatic filling system
