

## Klavermat 300 + BF capillary matting

The Klavermat 300 capillary matting is a quality product that is produced from 100% new, high-quality synthetic fibers. Equipped with a black anti-algae foil.

Every fiber has exactly the same properties. In combination with the unique 3-dimensional structure of the mat, this results in a very good capillary effect. A wide range of crops can be grown on the Klavermat.

The Klavermat 300 + BF capillary matting is distinguished by its robustness, chemical resistance, constant operation and long service life. With the Klavermat it is possible to grow crops in a reproducible way and to quickly switch between different crops.

The Klavermat 300 + BF capillary matting offers a high capillary effect, in combination with a good water capacity. The abbreviation BF stands for black anti-algae foil. The foil is wrapped loosely on the capillary matting and has a fine perforation.

### **Klavermat 300 + BF**

Weight: 300 gr/m<sup>2</sup>  
 Anti-algae foil: Black – 30 µm  
 Water capacity: 3,0 to 3,5 liter/m<sup>2</sup>

Length: 50 meter  
 Width: 8 cm to 250 cm

### **Customization:**

Henofa has punching and cutting machines to provide customization, for selling tables, cultivation gutters, container fields and deviating lengths. For more information, please send us a email on [info@henofa.com](mailto:info@henofa.com).

<b>Technical specification</b>	<b>Non-woven capillary matting</b>	
	<b>Nominal:</b>	<b>Tolerance:</b>
Composition:	100% new synthetic fibers	
Fiber composition	100% new synthetic fibers	
Weight (gr/m <sup>2</sup> )	300	5%
Thickness (mm)	5,0	5%
Tensile-strength (kg/cm <sup>2</sup> ) Length-dry	8,5	
Tensile-strength (kg/cm <sup>2</sup> ) Width-dry	7,0	
Tensile-strength (kg/cm <sup>2</sup> ) Length-wet	6,5	
Tensile-strength (kg/cm <sup>2</sup> ) Width-wet	7,5	
Absorption capacity (ltr/m <sup>2</sup> )	3,0 to 3,5	
Standard Length	50 meter	
Colour	Black
