

# Heno Geo J600

Heno Geo J600 is a biodegradable geotextile and is used to protect embankments, slopes and other surfaces against erosion from wind and rain. It is often used in new planting.

The plants can easily be planted after laying the Heno Geo J600 in the substrate by cutting a cross in the geotextile. It is also possible to sow (grass) seeds directly in the geotextile. The vegetation eventually takes over the function of the geotextile.

Wooden Ground Anchors are recommended to secure the jute felt to slopes or surfaces.

## Functions and Benefits

- 100% biodegradable.
- Prevents erosion and leaching.
- Protect the plant against frost and low temperatures.
- Protect against dehydration because evaporation is inhibited.
- Prevent the explosive growth of weed in the start-up phase.
- Natural degradation within 1-2 years, depending on weather conditions.

**Product Specifications**

<b>Material</b>	100% jute (biodegradable)
<b>Weight</b>	600 g/m <sup>2</sup>
<b>Roll length</b>	50 m
<b>Roll width</b>	2,00 m
Other sizes available on request.
