

Heno Symbol Foil

Heno symbol foil is a covering material. To be used during cultivation in combination with an capillary matting. The importance of covering materials is underestimated by many growers. For example, the Heno symbol foil has the following advantages;

- ❖ Prevents root growth
- ❖ Prevents algae growth
- ❖ Prevents unnecessary evaporation
- ❖ Extends the life of the capillary matting
- ❖ Protects the mat against mechanical influences such as walking and sweeping

The symbol foil has fixed distances between the symbols. This allows the grower to accurately spread pot plants during cultivation. The distances between the symbols are as follows;

- ❖ Dots: 124 mm 74,7 pots per m²
- ❖ Circles: 142 mm 57,7 pots per m²
- ❖ Triangles: 166 mm 42,9 pots per m²
- ❖ Squares: 199 mm 30,2 pots per m²

The Klavermat [125](#), [200](#), [300](#) and BWM [200](#), [300](#) and [400](#) can be equipped with Heno Symbol foil during production. This leads to savings in construction costs.

Heno Symbol foil:

Weight: 40 µm
Color: Black with white symbols

Length: 300 meter
Width: 2 meter
