Heno
anti-algae foil

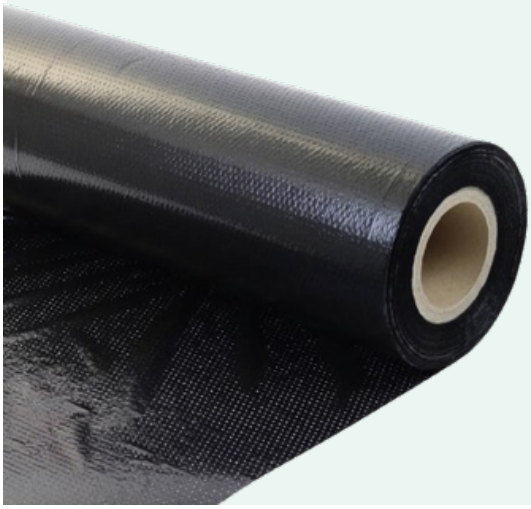

Foil provided with fine flame perforation to prevent algae growth and contamination in the capillary mat. The importance of these covering materials is underestimated by many growers.

With flame perforated foil, the perforation is applied by means of heated needles. This makes the foil stronger and less likely to tear. By also choosing for the covering materials from Henofa BV during cultivation, you are assured of a reliable, efficient, qualitative and complete watering system.

Functions of the Heno anti-algae foil:

- Prevents algae growth in the capillary mat;
- Prevents unnecessary evaporation;
- Extends the life of the capillary mat;
- Protects the mat against mechanical influences such as walking and sweeping;
- Excellent water permeability.

The capillary mattings: Klavermat 125, 200, 300 and BWM 200, 300 and 400 can be equipped with anti-algae foil during production. This leads to savings in construction costs.

Dimension & Specification

Weight:	30mu
Colour:	Black or white
Perforation:	Small or big
Length:	100, 250 of 500 meter
Width:	1,20 1,50, 1,65, 2,00 en 2,10 meter
