

# Heno Capillary Wick

Heno capillary wicks are made from 100% new, high-quality synthetic fibers. The wicks have an excellent capillary effect.

The function of the capillary wick is to provide a continuous and rapid supply of water, to supplement or replace traditional watering. The capillary wicks are easy to place through the drainage holes in the pot.

Capillary wicks are well suited for professional use as a sub-irrigation method. We supply capillary wicks for various pot producers, which are part of an automatic watering system for plants.

For home and hobby use, the capillary wick is a simple and inexpensive solution to keep plants supplied with water. For example, when you are on vacation or away from home for a longer period of time.

Weight:	100 gr./m <sup>2</sup>
Material:	100% Synthetic fibers
Water capacity:	1,0 - 1,20 liter/m <sup>2</sup>
Colour:	White
Length:	35 or 45 cm
Width:	2,8 cm
Packaging:	500 pieces
