

Heno Symbol Foil

Heno symbol foil is a covering material to be used during cultivation in combination with an capillary matting. The importance of covering materials is underestimated by many growers. For example, the Heno symbol foil has the following advantages;

- ❖ Prevents root growth in the capillary mat;
- ❖ Prevents algae growth in the capillary mat;
- ❖ Prevents unnecessary evaporation;
- ❖ Extends the life of the irrigation mat;
- ❖ Protects the mat against mechanical influences such as walking and sweeping.

The symbol foil has distances between the symbols. This allows the grower to accurately spread potted plants during cultivation. The distances between the symbols are as follows;

- ❖ Dots: 124 mm 74,7 pots per m²
- ❖ Circles: 142 mm 57,7 pots per m²
- ❖ Triangles: 166 mm 42,9 pots per m²
- ❖ Squares: 199 mm 30,2 pots per m²

Heno Symbol Foil:

Weight: 40 µm

Colour: Black

Length: 300 meter

Width: 2 meter
